Detail: *Leaves, Maidenhair Ginkgo* by Linda Williams Palmer - 14" h x 18 1/2" w - framed

CHAMPION STATISTICS

Circumference: 182" Crown Spread: 60' Height: 59' Bigness Index: 256

Fossils prove that the Ginkgo species has been present on the earth for about 250 million years. Modern-day Ginkgos continue to be long-lived; a tree planted now could survive for over 10 centuries. It is a slow-growing tree with few diseases; it thrives in most locations and resists pollution, making it a popular shade tree in big cities. The Maidenhair Ginkgo is quickly identified by its small fan-shaped leaves that turn bright yellow in the fall. - LWP

EDUCATIONAL SPONSORS

"Growing Champion Classrooms" materials are based on the 2012-2014 exhibit *Arkansas Champion Trees: An Artist's Journey*, Drawings by Linda W. Palmer, and are provided by Entergy Arkansas and the School of Forest Resources, University of Arkansas at Monticello, with support, in part, by the Arkansas Arts Council, an agency of the Department of Arkansas Heritage and by the National Endowment for the Arts.
